Drawing upon a wealth of past research and results, this book provides a comprehensive summary of state-of-the-art methods for empirical modeling of forest trees and stands. It opens by describing methods for quantifying individual trees, progresses to a thorough coverage of whole-stand, size-class and individual-tree approaches for modeling forest stand dynamics, growth and yield, moves on to methods for incorporating response to silvicultural treatments and wood quality characteristics in forest growth and yield models, and concludes with a discussion on evaluating and implementing growth and yield models. Ideal for use in graduate-level forestry courses, this book also provides ready access to a plethora of reference material for researchers working in growth and yield modeling.

NEW YORK TIMES BESTSELLER • "As sweet and funny and sad and true and heartfelt a memoir as one could find." —from the foreword by Augusten Burroughs Ever since he was young, John Robison longed to connect with other people, but by the time he was a teenager, his odd habits—an inclination to blurt out non sequiturs, avoid eye contact, dismantle radios, and dig five-foot holes (and stick his younger brother, Augusten Burroughs, in them)—had earned him the label "social deviant." It was not until he was forty that he was diagnosed with a form of autism called Asperger's syndrome. That understanding transformed the way he saw himself—and the world. A born storyteller, Robison has written a moving, darkly funny memoir about a life that has taken him from developing exploding guitars for KISS to building a family of his own. It's a strange, sly, indelible account—sometimes alien yet always deeply human.

The routine jobs of yesterday are being replaced by technology and/or shipped off-shore. In their place, job categories that require knowledge management, abstract reasoning, and personal services seem to be growing. The modern workplace requires workers to have broad cognitive and

affective skills. Often referred to as "21st century skills," these skills include being able to solve complex problems, to think critically about tasks, to effectively communicate with people from a variety of different cultures and using a variety of different techniques, to work in collaboration with others, to adapt to rapidly changing environments and conditions for performing tasks, to effectively manage one's work, and to acquire new skills and information on one's own. The National Research Council (NRC) has convened two prior workshops on the topic of 21st century skills. The first, held in 2007, was designed to examine research on the skills required for the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop, held in 2009, was designed to explore demand for these types of skills, consider intersections between science education reform goals and 21st century skills, examine models of high-quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve more deeply into the topic of assessment. The goal for this workshop was to capitalize on the prior efforts and explore strategies for assessing the five skills identified earlier. The Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the previous workshops, with special attention to recent developments in technology-enabled assessment of critical thinking and problem-solving skills. In designing the workshop, the committee collapsed the five skills into three broad clusters as shown below: Cognitive skills: nonroutine problem solving, critical thinking, systems thinking Interpersonal skills: complex communication, social skills, team-work, cultural sensitivity, dealing with diversity Intrapersonal skills: self-management, time management, self-development, self-regulation, adaptability, executive functioning Assessing 21st Century Skills provides an integrated summary of the presentations and discussions from both parts of the third workshop.

Pendidikan karakter merupakan salah satu upaya untuk membangun karakter unggul seperti diamanahkan dalam tujuan pendidikan nasional.

Pendidikan karakter dilakukan sejak di Pendidikan Anak Usia Dini hingga perguruan tinggi. Salah satu kesulitan pendidik dalam melaksanakan pendidikan karakter adalah asesmen dan evaluasinya, sehingga sering kali pendidik melaksanakan pembelajaran tanpa menanamkan karakter dan penilaiannya. Buku Pengembangan Instrumen Karakter ini menjelaskan tentang konsep pengembangan instrumen, khususnya karakter, dan teknik analisis pengujian validitas dan reliabilitasnya. Uraian detail tentang langkah pengembangan instrumen, cara menganalisis hasil pengembangan dan hasil pengembangan mengantar pembaca untuk dapat mengikutinya dengan mudah. Buku ini bermanfaat bagi calon guru, guru, peneliti, dan para pemangku kebijakan bidang pendidikan. Kelugasan bahasa dalam menjelaskan konsep instrumen karakter sangat membantu para pemerhati pendidikan dalam memahami teknik analisis kualitas instrumen dan jenis instrumen karakter. Penyajian instrumen mulai dari karakter disiplin, tanggung jawab, toleransi, kreatif, local wisdom, konservasi, Entrepreneurship, peduli, religius, kepedulian sosial, rasa ingin tahu, hingga global citizen. Berbagai instrumen untuk menilai karakter disajikan dengan detail beserta hasil validasi dari segi konten/isi dan reliabilitasnya. Teknik perhitungan indeks validitas dan reliabilitas juga disampaikan dengan runtut. Teori tes klasik dan teori tes modern 1-parameter logistik (Rasch Model) digunakan untuk menganalisis validitas dan reliabilitas instrumen yang telah dikembangkan. Buku Pengembangan Instrumen Karakter ini dapat digunakan sebagai contoh dalam pengembangan suatu instrumen, khususnya karakter. Diharapkan buku ini membawa manfaat bagi pelaku, peneliti dan pemerhati pendidikan karakter dan segera disusul dengan karya-karya tentang evaluasi berikutnya.

This graduate textbook covers topics in statistical theory essential for graduate students preparing for work on a Ph.D. degree in statistics. This new edition has been revised and updated and in this fourth printing, errors have been ironed out. The first chapter provides a quick overview of concepts and results in measure-theoretic probability theory that are useful in statistics. The second chapter introduces some fundamental concepts in statistical decision theory and inference. Subsequent chapters contain detailed studies on some important topics: unbiased estimation, parametric estimation, nonparametric estimation, hypothesis testing, and confidence sets. A large number of exercises in each chapter provide not only practice problems for students, but also many additional results.

Disaster risk reduction in school curricula: case studies from thirty countries Springer

This new publication in the Models and Modeling in Science Education series synthesizes a wealth of international research on using multiple representations in biology education and aims for a coherent framework in using them to improve higher-order learning. Addressing a major gap in the literature, the volume proposes a theoretical model for advancing biology educators' notions of how multiple external representations (MERs) such as analogies, metaphors and visualizations can best be harnessed for improving teaching and learning in biology at all pedagogical levels. The content tackles the conceptual and linguistic difficulties of learning biology at each level—macro, micro, sub-micro, and symbolic, illustrating how MERs can be used in teaching across these levels and in various combinations, as well as in differing contexts and topic areas. The strategies outlined will help students' reasoning and problem-solving skills, enhance their ability to construct mental models and internal representations, and, ultimately, will assist in increasing public understanding of biology-related issues, a key goal in today's world of pressing concerns over societal problems about food, environment, energy, and health. The book concludes by highlighting important aspects of research in biological education in the post-genomic, information age.

When wars break out, international attention and media reporting invariably focus on the most immediate images of human suffering. Yet behind these images is a hidden crisis. Across many of the world's poorest countries, armed conflict is destroying not just school infrastructure, but the hopes and ambitions of generations of children. The hidden crisis: Armed conflict and education documents the devastating effects of armed conflict on

education. It examines the widespread human rights abuses keeping children out of school. The Report challenges an international aid system that is failing conflict-affected states, with damaging consequences for education. It warns that schools are often used to transmit intolerance, prejudice and social injustice. This ninth edition of the Education for All Global Monitoring Report calls on governments to demonstrate greater resolve in combating the culture of impunity surrounding attacks on schoolchildren and schools. It sets out an agenda for fixing the International aid architecture. And it identifies strategies for strengthening the role of education in peacebuilding. The Report includes statistical indicators on all levels of education in more than 200 countries and territories. It serves as an authoritative reference for education policy-makers, development specialists, researchers and the media
