Dairy Farmers of Britain
Routledge

This report analyzes the value chain and presents a food loss assessment of tomato crop in Nubaria District and Sharqia Governorate, as part of the project “Food Loss and Waste Reduction and Value Chain Development for Food Security in Egypt and Tunisia” implemented by the Food and Agriculture Organization (FAO) in collaboration with the Egyptian Ministry of Agriculture and Land Reclamation (MALR) with funding from the Italian Agency for Development Cooperation. It aims to deepen understanding of the tomatoes value chain and the particular problem of food loss, in order to promote sustainable, market-based solutions that respond to the needs of small-scale holders.

Food loss analysis for tomato value chains in Egypt CABI

While a good grasp of the many separate aspects of agriculture is important, it is equally essential for all

those involved in agriculture to understand the functioning of the farming system as a whole and how it can be best managed. It is necessary to re-assess and understand rain-fed farming systems around the world and to find ways to improve the selection, design and operation of such systems for long term productivity, profitability and sustainability. The components of the system must operate together efficiently; yet many of the relationships and interactions are not clearly understood. Appreciation of these matters and how they are affected by external influences or inputs are important for decision making and for achieving desirable outcomes for the farm as a whole. This book analyses common rain-fed farming systems and defines the principles and practices important to their effective functioning and management.

E-Marketing in Developed and Developing Countries: Emerging Practices
Food & Agriculture Org.

The world is losing species and biodiversity at an unprecedented rate. The causes go deep and the losses are driven by a complex array of social, economic, political and biological factors at different levels. Immediate causes such as over-harvesting, pollution and habitat change have been well studied, but the socioeconomic factors driving people to degrade their environment are less well understood. This book examines the underlying causes. It provides analyses of a range of case studies from Brazil, Cameroon, China, Danube River Basin, India, Mexico, Pakistan, Philippines, Tanzania and Vietnam, and integrates them into a new and interdisciplinary framework for understanding what is happening. From these results, the editors are able to derive policy conclusions and recommendations for operational and institutional approaches to address the root causes and reverse the current trends. It makes a

contribution to the understanding of all those - from ecologists and conservationists to economists and policy makers - working on one of the major challenges we face.

Genetics and Breeding for Disease Resistance of Livestock IGI Global

As external forces increase the demand for land conversion, communities are increasingly open to policies that encourage conservation of farm and forest lands. This interest in conservation notwithstanding, the consequences of land-use policy and the drivers of land conversions are often unclear. One of the first books to deal exclusively with the economics of rural-urban sprawl, Economics and Contemporary Land-Use Policy explores the causes and consequences of rapidly accelerating land conversions in urban-fringe areas, as well as implications for effective policy responses. This book emphasizes the critical role of both spatial and economic-ecological interactions in contemporary land use, and the importance of a practical, policy-oriented perspective. Chapters illustrate an interaction of

conceptual, theoretical, and empirical approaches to land-use policy and highlight advances in policy-oriented economics associated with the conservation and development of urban-fringe land. Issues addressed include (1) the appropriate role of economics in land-use policy, (2) forecasting and management of land conversion, (3) interactions among land use, property values, and local taxes, and (4) relationships among rural amenities, rural character, and urban-fringe land-use policy. Economics and Contemporary Land-Use Policy is a timely and relevant contribution to the land-use policy debate and will prove an essential reference for policymakers at the local, state, and federal levels. It will also be of interest to students, academics, and anyone with an interest in the practical application of economics to land-use issues.

Administration Edward Elgar Publishing

Food loss is a serious issue in the United States. It affects all aspects of the supply chain, from farmers to consumers. While much is already known about loss at the

consumer level, our understanding of the amount of food that never makes it to this stage is more limited. The Economics of Food Loss in the Produce Industry focuses on the economics of food loss as they apply to on-farm produce production, and the losses that are experienced early. The book both analyses current food loss literature and presents new empirical research. It draws lessons from those who have encountered these issues by focusing on how past regional or national estimates of food loss have been conducted with varying degrees of success. It includes chapters on several themes: understanding food loss from an economic perspective; efforts to measure food loss; case studies across commodities within the produce industry; and economic risks and opportunities. The commodity case studies provide detailed discussion of factors impacting changes in loss levels within the produce industry, and a wealth of knowledge on strategies and contexts is developed. The book concludes by identifying critical knowledge gaps and establishing future

priorities. This book serves as an essential reference guide for academics, researchers, students, legislative liaisons, non-profit associations, and think tank groups in agriculture and agricultural economics.

Advances in Agriculture Research and Application: 2011 Edition is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Agriculture. The editors have built Advances in Agriculture Research and Application: 2011 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Agriculture in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Advances in Agriculture Research and Application: 2011 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-

reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

The Economics of Food Loss in the Produce Industry Routledge

The need to reduce food loss and waste is firmly embedded in the 2030 Agenda for Sustainable Development. Food loss and waste reduction is considered important for improving food security and nutrition, promoting environmental sustainability and lowering production costs. However, efforts to reduce food loss and waste will only be effective if informed by a solid understanding of the problem. This report provides new estimates of the percentage of the world's food lost from production up to the retail level. The report also finds a vast diversity in existing estimates of losses, even for the same commodities and for the same stages in the supply chain. Clearly identifying and understanding critical loss points in specific supply

chains – where considerable potential exists for reducing food losses – is crucial to deciding on appropriate measures. The report provides some guiding principles for interventions based on the objectives being pursued through food loss and waste reductions, be they in improved economic efficiency, food security and nutrition, or environmental sustainability.

Farm Communities at the Crossroads BRILL

Using a combination of global, national and household level analysis this study examines the potential effects of agricultural policy and trade reform.

The Value of Food Loss and Waste: Not All Food Is Created Equal
WorldFish

I write because I am concerned that I and my agricultural colleagues have avoided addressing the moral dimension of the environmental and social problems we have contributed to. I hope for an exchange of ideas about agriculture's moral dilemmas. I encourage my readers to engage in a collective conversation about the dilemmas and avoid remaining in what Merton calls "the

collective arrogance and despair of his own herd." If those engaged in agriculture continue to ignore and fail to realize our common difficulties they will be addressed and resolved by societal pressure and political action, which may not yield the resolution we favor. The book's goal is not to resolve the moral dilemmas raised. It is to raise them and encourage thought and discussion. It will ask but not answer why nearly all involved in agriculture have not addressed the moral concerns voiced by the general public. The agricultural enterprise is committed to the benefits and future success of the present, very productive, chemical, capital, and energy intensive system, which is, in the minds of many, not sustainable. The internal justification invokes the moral claim that they feed the world's population. The question remains whether or not the prevailing moral justification of feeding the world is adequate given all the issues modern, developed country agriculture faces: pesticides in soil, water, and food, cruelty to animals, Biotech/GMO's, corporate agriculture, pollution by animal

factory waste, exploitation of and cruelty to migrant labor.

Economics and Contemporary Land Use Policy Academic Press
Genetics and Breeding for Disease Resistance of Livestock is a solid resource that combines important information on the underlying genetic causes and governing factors for disease resistance in food animals and applications for breeding purposes. It describes genomics at each species level to help researchers and students understand disease resistance and immunology using genomics and its application in breeding for disease resistance. This useful reference makes it easy for readers to understand and undergo further research in immunology and disease resistance for livestock. It includes novel applications and research material that is ideal for students, teachers, academicians and researchers. Presents basic principles and protocols to describe research methodologies through diagrammatic illustrations with figures, flow charts, examples, and references Covers various disease

occurrences in livestock and the methodologies available to identify the various pathogens responsible for these diseases Includes advanced breeding techniques and practical applications
Rainfed Farming Systems Springer Nature
The STAX and SCO shallow loss crop insurance products were introduced in the 2014 farm bill. This research investigates the farm-level performance of STAX for cotton growers. Using 10 years of actual farm yield data for the period 1999 to 2008, certainty equivalent gains were evaluated under four treatments in Texas, Mississippi and Louisiana for non-irrigated and irrigated cotton production. Following the current practice for STAX, county yield is estimated using yield data from YP, RP, and RP-HPE policies rather than NASS county level yield data. Findings show that, assuming actuarially-fair premiums, certainty equivalent gains for RP tend to be higher than for STAX. But with subsidized premiums, the opposite outcome sometimes occurs. Furthermore, with subsidized premiums the findings indicate that

almost all farms would benefit from purchasing STAX as a complement to RP. The use of actual farm yield data highlights the heterogeneity of STAX farm-level impacts.

Involuntary Exits from Farming Routledge

Through in-depth case studies of local communities in four distinct coastal areas in Southern Thailand, the authors are able to assess objectively the underlying economic causes, and consequences, of mangrove deforestation due to the expansion of shrimp farms.

Toward the Next Generation of Farm Policy

The Stationery Office
This report illustrates the food loss assessment studies undertaken along the maize, sunflower and beans supply chains in Uganda in 2015-16 and 2016-17. They aimed to identify the critical loss points in the selected supply chains, the key stages at which food losses occur, why they occur, the extent and impact of food losses and the economic, social and environmental implications of the food losses. Furthermore, these studies also evaluated the feasibility of potential interventions to reduce food losses and

waste.

Safety in the process industries is critical for those who work with chemicals and hazardous substances or processes. The field of loss prevention is, and continues to be, of supreme importance to countless companies, municipalities and governments around the world, and Lees' is a detailed reference to defending against hazards. Recognized as the standard work for chemical and process engineering safety professionals, it provides the most complete collection of information on the theory, practice, design elements, equipment, regulations and laws covering the field of process safety. An entire library of alternative books (and cross-referencing systems) would be needed to replace or improve upon it, but everything of importance to safety professionals, engineers and managers can be found in this all-encompassing three volume reference instead. The process safety encyclopedia, trusted worldwide for over 30 years Now available in

print and online, to aid searchability and portability Over 3,600 print pages cover the full scope of process safety and loss prevention, compiling theory, practice, standards, legislation, case studies and lessons learned in one resource as opposed to multiple sources

This comprehensive handbook represents a definitive state of the current art and science of food waste from multiple perspectives. The issue of food waste has emerged in recent years as a major global problem. Recent research has enabled greater understanding and measurement of loss and waste throughout food supply chains, shedding light on contributing factors and practical solutions. This

book includes perspectives and disciplines ranging from agriculture, food science, industrial ecology, history, economics, consumer behaviour, geography, theology, planning, sociology, and environmental policy among others. The *Routledge Handbook of Food Waste* addresses new and ongoing debates around systemic causes and solutions, including behaviour change, social innovation, new technologies, spirituality, redistribution, animal feed, and activism. The chapters describe and evaluate country case studies, waste management, treatment, prevention, and reduction approaches, and compares research methodologies for better understanding food wastage. This book is essential reading for the growing number of food waste scholars, practitioners, and policy makers interested in researching, theorising, debating, and solving the multifaceted phenomenon of food waste.

An Analysis of Farm-level Performance of Shallow Loss Products Based on Aggregated Farm Yields
Routledge

While e-marketing has

emerged as an aid in allowing businesses to reach a broader audience, evolutions in computer science and technology have made its comprehension a bit more complex. E-Marketing in Developed and Developing Countries: Emerging Practices aims to create a deeper understanding of the policies and practices that are involved in a successful e-marketing environment. This publication highlights the strategies and applications currently being used in both developed and developing countries; proving to be beneficial for entrepreneurs, policy makers, researchers, and students wishing to expand their comprehensive knowledge in this field. [Routledge Handbook of Food Waste](#) Food & Agriculture Org.

The purpose of this book is to assess a variety of economic issues as they relate to agro-biodiversity and show how addressing these issues can assist in agro-biodiversity policy-making. This is illustrated using empirical data from some of the countries (Ethiopia, Nepal and Zambia) which are part of the Genetic Resources

Policy Initiative. The empirical chapters apply the relevant economic methods, including regression analysis, choice experiments, hedonic pricing, contingent valuation and farm business income analysis. The authors discuss the economics of managing crop diversity

on-farm in the context of crop variety attribute preferences, farmers' perception of agro-biodiversity loss, and value addition and marketing of the products of traditional crop varieties. The case studies include detailed analysis of traditional varieties of groundnut, maize, rice,

sorghum, and teff. The results are relevant not only to GRPI countries but also to other countries concerned with the sustainable utilization of these resources. Overall, the studies illustrate how genetic resources issues can be integrated into rural development interventions.
