 In this richly illustrated book, a range of accessible examples are used to show how Bayes' rule is actually a natural consequence of commonsense reasoning. The tutorial style of writing, combined with a comprehensive glossary, makes this an ideal primer for the novice who wishes to become familiar with the basic principles of Bayesian analysis.

 Manuale che indaga la complessa tematica dell'handicap, sia fisico che psichico (autismo). Si ritiene che il compito dell'operatore, al riguardo, non sia quello di "inquadrare" la situazione, bensì di recuperare e sviluppare le abilità residue nel

paziente. Il punto di partenza per questo difficile percorso è la scuola, dove è importante il processo di integrazione. Ma anche i sistemi robotici e la pet-therapy aiutano.

**Climbing 8000-Meter Peaks in Winter** John Wiley & Sons  
 Extracorporeal membrane oxygenation (ECMO) has been in clinical use for some 40 years, but it is only in the past decade that its application in the treatment of life-threatening circulatory and respiratory failure has truly flourished. This book presents a comprehensive overview of both pathophysiological and practical aspects of circulatory and respiratory extracorporeal support. The basics of ECMO, including its history, the "ECMO team", cannulation, materials, and blood-surface interactions, are first discussed. The various indications for and particular characteristics of circulatory and respiratory extracorporeal life support are then described in detail in the main part of the book. Patient care during ECMO and monitoring of the ECMO patient are also carefully covered, with explanation of the management of technical and clinical complications and transport-related

problems. Further topics include long-term therapy options beyond ECMO, such as ventricular assist devices and transplants, outcome, the new frontiers of ECMO for organ procurement and future challenges. The authors are well-known experts in the field whose authoritative contributions and attention to practical aspects will be invaluable for novices and experienced practitioners alike.

This volume discusses the many recent significant developments, and identifies important problems, in the field of social indicators. In the last ten years the methodology of multivariate analysis and synthetic indicators construction significantly developed. In particular, starting from the classical theory of composite indicators many interesting approaches have been developed to overcome the weaknesses of composites. This volume focuses on these recent developments in synthesizing indicators, and more generally, in quantifying complex phenomena.

Il primo manuale di giornalismo che tiene conto della scrittura giornalistica e dell'organizzazione del lavoro nell'era dell'integrazione tra modello cartaceo e modello virtuale. L'obiettivo di questo manuale è fornire un sapere teorico-pratico integrato per chi voglia operare sulla carta stampata, sul radio-televisivo e sulle diverse piattaforme digitali presenti in Rete. Il libro si sviluppa lungo otto linee didattiche, ciascuna delle quali tiene insieme le acquisizioni della tradizione con le nuove evoluzioni teorico-pratiche del giornalismo, con un ricco corredo di esempi tratti dai più autorevoli media italiani e stranieri: - la ridefinizione del concetto di notizia ai tempi dell'informazione in tempo reale; - la teoria e la tecnica della scrittura giornalistica, tra cartaceo e on-line; - lo studio dei generi del giornalismo, da quelli più tradizionali, come la cronaca e l'intervista, a quelli più recenti, come il retroscena; - l'organizzazione del lavoro nei principali media e la sua evoluzione segnata dal ruolo crescente delle tecnologie; - la crisi delle aziende editoriali e la transizione verso il mercato delle nuove piattaforme digitali, attraverso esempi concreti tratti dalle esperienze di alcune delle più grandi e innovative imprese del mondo, come "New York Times", "Washington Post", Bbc, "Guardian", fino allo studio delle nuove avventure editoriali sulla rete; - l'analisi del caso italiano, dell'omologazione e della prevalenza dell'informazione politica che caratterizza i media nostrani; - lo studio del foto e video-giornalismo e delle nozioni di grafica essenziali; - l'etica del giornalismo e i problemi aperti dalla necessità di tutelare la privacy di fronte alla grande forza di impatto che le moderne tecnologie informative hanno sulla vita delle persone.

L'Informazione bibliografica FrancoAngeli

Language, whether spoken or written, is an important window into people's emotional and cognitive worlds. Text analysis of these narratives, focusing on specific words or classes of words, has been used in numerous research studies including studies of emotional, cognitive, structural, and process components of individuals' verbal and written language. It was in this research context that the LIWC program was developed. The program analyzes text files on a word-by-word basis, calculating percentage words that match each of several language dimensions. Its output is a text file that can be opened in any of a variety of applications, including word processors and spreadsheet programs. The program has 68 pre-set dimensions (output variables) including linguistic dimensions, word categories tapping psychological constructs, and personal concern categories, and can accommodate user-defined dimensions as well. Easy to install and use, this software offers researchers in social, personality, clinical, and applied psychology a valuable tool for quantifying the rich but often slippery data provided in the form of personal narratives. The software comes complete on one 3 1/2 diskette and runs on any Windows-based computer.

Brute Force looks at people having the most contact with everyday animal abuse- humane law enforcement officers who are charged with enforcing anti-cruelty statutes. The author spent one year studying 30 "animal cops" and dispatchers in two large cities. They see themselves as a power for the helpless, a voice for the mute. On-the-job experience changes this view. Rather than "fighting the good fight" against egregious cases of cruelty, they are overwhelmed with complaints that are ambiguous and must be "stretched" to qualify as legally defined abuse or with complaints—barking dogs or "thin" pets—that are used in interpersonal disputes to get neighbors or spouses into trouble. Even more discouraging to officers are clear-cut and extreme cases of cruelty that do not lead to guilty verdicts or stiff penalties in court. Resulting cynicism is aggravated when rookies realize that they are seen as second-rate "wannabe" cops or closet animal "extremists." With little legitimate authority to enforce the law, animal cops become humane educators who try to make people into responsible pet owners.

This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. Drawing upon his passion for statistics and teaching, Mike Sullivan addresses the needs of today's students, the challenges teachers face, and changes in the statistics community. With feedback from his own students and classroom experience, Fundamentals of Statistics provides the tools to help students learn better and think statistically in a concise, friendly presentation. The CD contains all the student supplement content, the data sets, graphing calculator manual, excel manual, a PDF of the Formula and Table card from the back of the book, and a guide to using statcrunch with the title. Note: This is just the standalone book and CD, it does not come with an Access Card. If an Access Card is required ask your instructor for the ISBN of the package which would include the Book & CD plus the Access Card..

\* Adventure memoir from a renowned winter climber at the top of

his game \* Moro reflects on some of his most significant climbs \*  
 A bestseller in Italy, this is the first English-language edition of Moro's story Simone Moro is a celebrated Italian alpinist who specializes in winter climbing: He holds the record for first winter ascents of 8000-meter peaks—Shisha Pangma, Makalu, and Gasherbrum II. A passionate climber, he is also an accomplished helicopter pilot and founder of a helicopter rescue program in Nepal. The Call of the Ice was written during Moro's dramatic winter attempt on Nanga Parbat in 2012—his twelfth attempt on that mountain—during weather delays and other breaks in the climb. Moro reflects on past climbs and partners, including the death of his longtime friend and climbing partner, Anatoli Boukreev, on Annapurna, his mourning when Boukreev died, and his subsequent recovery; Denis Urubko and the nature of climbing partnerships; two attempts on Shisha Pangma; Broad Peak; Makalu; and Gasherbrum II, which he, Urubko, and Cory Richards completed in February 2011 despite near-tragic moments when they miraculously escaped after being swept away by an avalanche. Many of Moro's climbs do not result in a summit and he explains why his interest lies in the attempt itself. In addition to these reflections, we relive in real-time his attempt on Nanga Parbat, which he and Urubko had to abandon after 51 days and 6600 meters! "I will go in winter. Again. Yes in winter. Just because it's my dream. Just because exploration never ends." – Simone Moro
