### **Complex Cases in Sport Psychology** John Wiley & Sons

This volume in the Handbook of Sports Medicine and Science series is a practical guide on the prevention of sports injuries. It covers all Olympic sports, plus additional sport activities with international competition, such as rugby. Focusing on reducing the potential for injuries, the book is organized by regions of the body. There are also chapters on the importance of injury prevention and developing an injury prevention program within a team. The authors identify the risk factors for specific injuries in each sport, typical injury mechanisms and risks associated with training.

Whitley, an archaeologist specializing in the study of prehistoric art and religion, interprets the symbolism of California's ancient rock art, demonstrating that these pictographs were not created simply for artistic expression, but were deliberately intended to represent a relatively few number of specific messages. Color photographs depict such things as vision questing, sexuality, the mythic past, life crises, altered states of consciousness, and more.

Young children and even infants work hard at mastering various skills and show spontaneous pleasure at their own accomplishment. John Nicholls explores the conditions that cause students to lose their unselfconscious involvement in a game or task and become concerned with how they are stacking up against others. Charting the development of children's concepts of luck, effort, and ability, he argues that with age they are increasingly prone to take superiority over others as the definition of success. An emphasis on interpersonal competition, which permeates Western society, exacerbates this egotistical tendency

and results in diminished accomplishment and alienation from school. To overcome these problems, Nicholls argues, we must "become as little children" for whom absorption in exploration and accomplishment come naturally, even when those around them are more competent. This ideal is unlikely to be promoted through technical approaches to education, or by the current emphasis on the role of education in economic development. Instead, Nicholls calls for a progressive approach to education. Difficult though it is to implement, this approach is most likely to increase equality of motivation for intellectual development, substantial accomplishment, satisfaction in work, and more productive relations with others. These are important ideas for anyone interested in achievement motivation, for those professionally involved in education, and for nonspecialists interested in, or worried about, how we educate our children.

As computer and space technologies have been developed, geoscience information systems (GIS) and remote sensing (RS) technologies, which deal with the geospatial information, have been rapidly maturing. Moreover, over the last few decades, machine learning techniques including artificial neural network (ANN), deep learning, decision tree, and support vector machine (SVM) have been successfully applied to geospatial science and engineering research fields. The machine learning techniques have been widely applied to GIS and RS research fields and have recently produced valuable results in the areas of geoscience, environment, natural hazards, and natural resources. This book is a collection representing novel contributions detailing machine learning techniques as applied to geoscience information systems and remote sensing.

No doubt about it, there was a time when Mickey Crowley was the busiest man in basketball. A legendary, world-class referee with a reputation for humor, fairness, and getting the call right, Mickey always has been a man in motion. He officiated dozens of college games annually from 1962 until 1991. His last game was the NCAA championship battle between Duke and Kansas. A member of six halls of fame, Mickey was on the ground floor in the 1980s when the Big East emerged as the nation's premier basketball conference. His face was a fixture at Madison Square Garden. Known for his quick wit, Mickey for years has told stories of his biggest games and coaches like Lou Carnesecca, John Thompson, P. J. Carlesimo, John Chaney, Mike Krzyzewski, Rick Pitino, and Bob Knight. Michael Jordan, Patrick Ewing, Shaquille O'Neal, Chris Mullin, and Lew Alcindor (Kareem Abdul-Jabbar) are among the more notable players Mickey has seen up close since he began his officiating career in 1957. Mickey also ran one of the nation's top basketball camps for referees for nearly forty years. He

traveled the world officiating games, notably in Puerto Rico, Uruguay, and Yugoslavia. Among his many stops was a stage in Las Vegas, where he once sang a duet with Suzanne Somers. Being a referee was Mickey's part-time job. For years, his full-time job was as a Nassau County administrator who assigned officials for hundreds of high school, college, and junior college sporting events. A native of Queens, New York, he served in the army, drove a truck, tended bar, managed a baseball team, and fathered a family. Now, he can proudly add author to his vast list of accomplishments with the publication of this autobiographical memoir, *Throw the Ball High*. **An Episodic History of Mathematics** John Wiley & Sons School-aged children in the U.S. and other Western nations spend almost half of their waking hours in leisure activities. For some, out-of-school time is perceived as inconsequential or even counterproductive to the health and well-being of young persons. Recently, however, there has been a growing recognition that--along with family, peers, and school--the organized activities in which some youth participate during these hours are important contexts of emotional, social, and civic development. They provide opportunities for young persons to learn and develop competencies that are largely neglected by schools. At the same time, communities and national governments are now channeling considerable resources into creating organized activities for young people's out-of-school time. This volume brings together a multidisciplinary, international group of experts to provide conceptual, empirical, and policy-relevant advances in research on children's and adolescents' participation in the developmental

contexts represented by extracurricular activities, and after-school and community programs. *Organized Activities as Contexts of Development* provides a handbook-like coverage of research in this new emerging field. It considers a broad developmental time-span from middle childhood through early adulthood, providing information on how motivation, participation, and developmental experiences change as youth get older. The contents cover one of the most salient topics in child and adolescent research, education, and social policy, placing consistent emphasis on developmental aspects and implications of organized activity participation for young persons. Representing contributors from several fields of study--psychology, criminal justice, leisure science, sociology, human development, education, prevention, and public policy--the book is designed to appeal to students and scholars in all these areas. Additionally, the volume is written to be of interest to professionals who administer programs and develop policy on youth.

The Competitive Ethos and Democratic Education Baha'i

Readers will discover how very recent scientific advances have overthrown a century of dogma about concussive brain injury.

**A Game Plan for Life** Physicians

In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. *Sports-Related Concussions in Youth: Improving the Science, Changing the Culture* reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in

military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. *Sports-Related Concussions in Youth* finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to *Sports-Related Concussions in Youth*, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.
